A Technology Proficient Faction

CASE STUDY

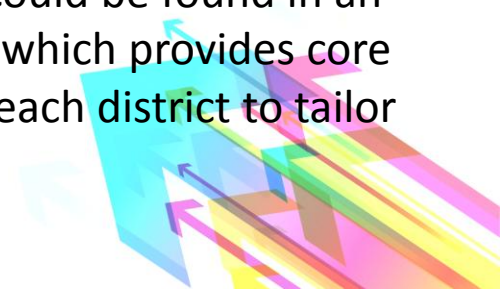

SCHOOL ERP SOLUTION

School ERP Solution Unifies Students, Faculty, Staff, and Business-Critical System. An ERP Solution for the international residential school situated in India that unifies students, faculty, staff, and business-critical system.

THE COMPANY

A residential school with state-of-the-art technology and time tested ethical values of our rich culture. It is at par with any reputed residential school of today and strives to perfect its aims and aspirations much beyond the vision of many institutions. The school was following manual administrative process, before implementing Toqsoft School ERP. Much readymade software was used for the different business critical. They did not have any solution for Transport Management, Library Management etc. The school management realized that the breadth and depth of functionality they needed could be found in an enterprise resource planning (ERP) system. They selected Toqsoft, which provides core school management, HR, and payroll functionality, while allowing each district to tailor their solution to the specific needs of school administration.

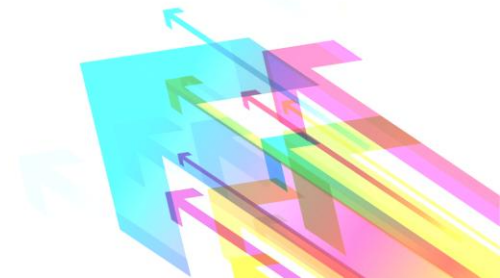

THE CHALLENGE

School ERP System is an enterprise multi-channel software application that allows Management to capture and store important information to meet compliance and archival needs. The main challenge to develop Education ERP is that it contains many fold with the integration of our other applications like HR, Payroll, Inventory, Library etc. The accuracy of the data and reporting was questionable and of significant concern to the senior management.

THE SOLUTION

However, the entire solution is designed based on a modular approach that gives flexibility to our clients to choose desired modules as per their requirements. We developed an ERP Solutions for the school that was the integration of many modules and give the appropriate reports to many different department. We have given a training programme to the many staffs of the school to start maintaining the school management and get rid of manual long and old process.

THE RESULT

Manual effort is reduced and speedy and accurate reports are generated. Data security is maintained on a departmental level. High degree of security and safety according to international standards. Better co-ordination between departments. Overall reduction of operating costs, and savings on time and efforts. Highly streamlined and effective workflow of administration and academia. Ensures greater efficiency. Unlimited number of users. Easy to customize.
